## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election with traverse of Group I, claims 1-11 and 14, in the reply filed on December 12, 2007 is acknowledged. The traversal is on the ground(s) that Example 1 of FR 2705568 does not anticipate the instantly claimed invention because the concentration of silica specified in claim 1 is not present. This is found persuasive. However, a holding of lack of unity of invention against Groups I and II is still found to be proper because the composition of Group I is not novel (see US Patent 5254585, Example 1, columns 3 and 4). The concentration of silica in the composition of US Patent 5254585 is 1.6% by weight relative to the weight of the total composition, including the capsule.

Claims 15-26 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on December 12, 2007.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Desjonqueres (US Patent 5254585).

Desjonquieres teaches a composition comprising peroxidized safflower oil (obtained by peroxidizing safflower oil) with a degree of peroxidation of 149 meq/kg and colloidal silica at a concentration of 1.6% by weight relative to the weight of the total composition, including the capsule (Example 1, columns 3 and 4). Desjonquieres further teaches the use of peroxidized lipids of the formula of claim 9 (column 2, lines 39-50) in said composition. Desjonquieres does not explicitly teach that the composition is compatible with use as a spray, the viscosity of the composition at 20°C, or the density of the composition; however these limitations are physical properties of the composition mentioned above and therefore are necessarily present in said composition.

It is noted that In re Best (195 USPQ 430) and In re Fitzgerald (205 USPQ 594) discuss the support of rejections wherein the prior art discloses subject matter which there is reason to believe inherently includes functions that are newly cited or is identical to a product instantly claimed. In such a situation the burden is shifted to the applicants to "prove that subject matter shown to be in the prior art does not possess characteristic relied on" (205 USPQ 594, second column, first full paragraph).

### ***Claim Objections***

Claim 11 is objected to because of the following informalities: Claim 11 depends from the later claim 14. Appropriate correction is required.
